Autoclavable and sterilizable: video adaptors and video couplers made by the Berliner Glas Group

The Berliner Glas Group has expanded its activities within the medical technology segment and from now on also offers autoclavable video couplers and video adaptors. These lenses are available in several fixed focal lengths and can be adapted to cameras of well-known manufacturers. They are produced as private label product in the housing according to customer requirements.

Due to the proprietary key technology „glass soldering“ that Berliner Glas has developed in-house, the company is able to manufacture hermetically sealed housings. The optics in the housing are moved without contact by an ingenious magnetic mechanism.

The fixed focal length lenses are autoclavable and can also be disinfected with aldehyde and non-aldehyde-based cleaning agents. Even after 500 autoclaving cycles in saturated water vapor the lenses are fully functional.

By developing and manufacturing optical, electronic and mechanical high-precision components, assemblies and systems the Berliner Glas Group pushes reliable new systems in medical technology.

About the Berliner Glas Group:

The BERLINER GLAS GROUP (www.berlinerglasgroup.com) is one of the world's leading providers of optical key components, assemblies and systems, as well as high-quality refined technical glass. With more than 1,100 employees, the BERLINER GLAS GROUP develops, produces and integrates optics, mechanics and electronics into innovative system solutions for its customers. As OEM partners from concept to volume production, the BERLINER GLAS GROUP companies serve innovative customers in various market segments – medical technology, semiconductor industry, laser and space technology, metrology and the display industry.
